YEAR COMPLETED

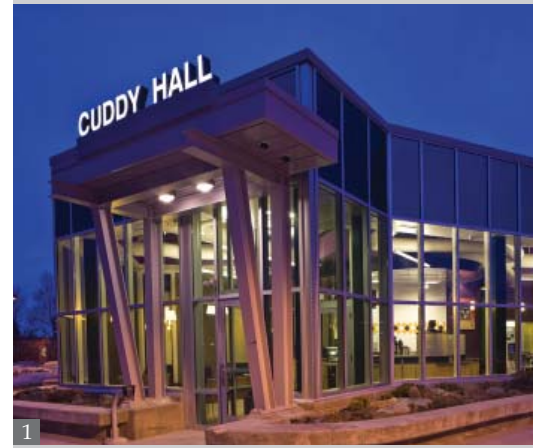

2008

This renovation project began with a condition survey of the existing facility. USKH analyzed the kitchen and serving line equipment conditions, electrical and mechanical age and capacity and remaining life expectancy of the exterior envelope and roofing materials.

Our in-house architects and engineers conducted a code analysis and made recommendations for needed upgrades as well as patron usage enhancements.

Next, USKH provided master planning for a new entry addition, remodel and expansion of the commons dining room, as well as the kitchen classroom laboratory and cafeteria serving line re-organization.

Finally the master plan includes areas of potential office and classroom additions and their impacts to current campus site utilization.

1. New entrance
2. New coffee bar
3. Gathering space
4. Natural light creates inviting areas for sitting and study
